

## Assignment -2 Python Programming

TeamID:PNT2022TMID53925

Assignment Date	24 September 2022
Student Name	Beulah Selcia Sweetty B
Student Roll Number	95071914017
Maximum Marks	2 Marks

Question-1:

Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Solution:

```
import random
import time
while(1):
    temp=random.randint(0,80)
    hum=random.randint(0,80)
    if(15<=temp<=30):
        #room temperature in degrees Celsius between
        15C - 30C
        print("Temperature is normal. Temperature = ",temp)
    elif(temp<15):
        print("Temperature is too low. Temperature = ",temp)
    elif(temp>30):
        print("Temperature is too high. Temperature = ",temp)
```

```

if(30<=hum<=50):                #humidity may percentage between 30% - 50%
    print("Humidity is normal. Humidity = ",hum)
elif(hum<30): print("Very less humidity.
Humidity = ",hum) elif(hum>50):
    print("Very high humidity. Humidity = ",hum)
print() time.sleep(2)            #It observe temperature every 2 seconds

```

**SAMPLE INPUT AND OUTPUT :**

The screenshot shows a Python IDE with a file explorer on the left, a code editor in the center, and a run console at the bottom. The code in the editor is as follows:

```

1 import random
2 import time
3 while(1):
4     temp=random.randint(0,80)
5     hum=random.randint(0,80)
6     if(15<=temp<=30):                #room temperature in degrees Celsius between 15C - 30C
7         print("Temperature is normal. Temperature = ",temp)
8     elif(temp<15):
9         print("Temperature is too low. Temperature = ",temp)
10    elif(temp>30):
11        print("Temperature is too high. Temperature = ",temp)
12    if(30<=hum<=50):                #humidity may percentage between 30% - 50%
13        print("Humidity is normal. Humidity = ",hum)
14    elif(hum<30):
15        print("Very less humidity. Humidity = ",hum)
16    elif(hum>50):
17        print("Very high humidity. Humidity = ",hum)
18    print()
19    time.sleep(2)                    #It observe temperature every 2 seconds
20 while(1)

```

The run console at the bottom shows the output of the program, which is a series of temperature and humidity readings separated by two-second intervals:

```

D:\coding in (c,java,python)\projects in python\2python\venv\Scripts\python.exe "D:/coding in (c,java,python)/projects in python/2python/Assignment .2.py"
Temperature is normal. Temperature = 21
Humidity is normal. Humidity = 37

Temperature is too high. Temperature = 60
Very less humidity. Humidity = 20

Temperature is too low. Temperature = 6
Very less humidity. Humidity = 21

Temperature is too high. Temperature = 53
Very high humidity. Humidity = 62

Temperature is too low. Temperature = 12
Humidity is normal. Humidity = 50

Temperature is too high. Temperature = 60
Very high humidity. Humidity = 78

```
